## ACKNOWLEDGEMENTS

In the spring of 1974 the USU Manpower Development Service undertook a study of the apprenticeship system in Utah with emphasis on the dropout problem. This research was carried out in cooperation with the Utah Apprenticeship Council and supported by a grant from the Utah State University Research Council. Additional funds were provided by the USU College of Business. The authors are especially indebted to Grant Tuckett, Director of Apprenticeship and Training, Utah Apprenticeship Council, and David Turner, State Director, Bureau of Apprenticeship Training, U.S. Department of Labor, for their generosity and assistance in providing information about the development of the Utah apprenticeship system. Their comments and suggestions, after they had reviewed an earlier draft of the report, were most helpful. However, the authors take full responsibility for any factual errors remaining and for the conclusions and recommendations contained in the report. The authors would also like to thank Vice President Dean F. Peterson, Dean Robert P. Collier, Professors B. Delworth Gardner and Bartell C. Jensen for their support and encouragement in this project. Gratitude is also expressed to Shelley Lee and Douglas Whipple for their assistance in collecting, coding, and keypunching the data, and to Margaret Rose for typing of the first draft and Linda Madsen for ably typing the final draft of this report.
